

FILIP SAROVIC

React Native, React & NodeJS

WORK EXPERIENCE

Huu, a 3d online experience (2022)

Web Developer - React, Unreal Engine

Huu is an experimental web experience that tells the stories of victims of war time sexual violence.

The user floats in air from island to island and as he approaches an island he can hear the stories of the victims.

The experience is still in development but a preview can be viewed at huu.world/#/pureweb

I was hired as one of the developers to provide a technical assistance and expertise to the team in order to deliver the end product and allow its launch on the market.

Elimiwait Parking (2022)

Web Developer - React, ReactNative

Elimiwait Parking is software company that owns a suit of applications for parking lot companies in the USA that aim at improving revenue and user experience, automating the process of parking, as well as providing insight to the managers of the overall business performance of a parking lot.

I was hired to contribute to the technical development of the product and implement new features to get an optimal end product. I also was a member of the team responsible for front-end parts, as well as the upgrade of fundamental dependencies and the restructuring of the vue.js software to React.

BookNDrive (2021 - 2022)

Web Developer - React, ReactNative, Java

BookNDrive is an Enterprise web and mobile app that is used for car sharing. The business is centered in Germany and has 10,000 daily active users. [#bookNdrive](#)

I worked as a junior developer on this enterprise project to help improve the product's everyday functionality. I was in charge of eliminating all bugs and enhancing products quality.

The project was built using react for frontend, node.js for backend and no-sql firestore. The project has a ci/cd set up for two environments qa and production. The database has a backup system set up that triggers once a month automatically.

Feedback.Exchange (2021 - 2022)

Web Developer - React, Node.js, Firebase, and NoSQL

Feedback.Exchange is a b2b an Enterprise software with a complicated from scratch built front-end and backend. On this project I served as a junior developer responsible for day to day operations and implementation of the new features, among other things. The Feedback.exchange front-end is built using very little dependencies and all in a custom code to support the modern ui. As I started working for the software company Nada.ba, the very first task that I received was to create and maintain its webpage.

The backend architecture is built using the most modern and advanced architecting methodologies and paradigms. The entire backend is built in a microservice architecture with a serverless implementation. [#feedback.exchange](#)

The front end is built using React, the backend using Node.js and Firebase and the database is NoSQL, Firestore.

Nada.ba (2021 - 2022)

Web Developer

On this project, the tasks assigned to me were related to UI/UX design, using JS/CSS pattern for styling. [#Nada.ba](#)

The technology I used were HTML and CSS for styling the said page. Considering that I had already worked using those tools I didn't have much trouble providing the needed outcome.

EDUCATION

ITAcademy, Sarajevo (2016 - 2019)

JavaScript Frontend Development

The Academy initially gave me the opportunity to learn the basics of programming and software development, also a good motivation to continue with personal development in that field. Technologies and tools that I used during schooling are Angular, React, SQL, Node.js, Vue.js, Adobe Photoshop & Illustrator.

ABOUT ME

I am extremely hard working, committed to efficiency and results. Successfully identified, diagnosed and fixed website issues. Inclined in developing databases (SQL & NoSQL), creating user interfaces, writing and testing codes, troubleshooting simple/complex issues and implementing new features based on user feedback. Personal growth and learning is one of my core driving forces. Passionate about tech, product, and improving the world. Video & board games enthusiast and a big fan of Sci-Fi books and magazines.

Citizenship: Bosnian

Birth-year: 1993

KEY TECHNICAL SKILLS

React || React Native || PostgreSQL || Node.js || NoSQL || Java || Advanced Version Control

SOFT SKILLS

Team oriented || Good negotiation skills || Positive Influence on the team || Developed analytical skills || Strategic planning

LANGUAGES

Bosnian/Croatian/Serbian || English
